 - *2:A range from 30cm to the arrival distance. Average value of 50 pulses.

TEST METHOD :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

①Measurement place

A place that is nothing of extreme light reflected in the room.

②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. (Ee \leq 10Lux)

③Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However, the infrared photodiode to be used for the transmitter should be $\lambda p=940nm, \Delta \lambda=50nm$. Also, photodiode is used of PD438B(Vr=5V). (Standard light / Light source temperature 2856°K).

Measuring system

According to the measuring system shown in Fig.-3
